

**NEW PRODUCT AT E.L. FOUST**

The Air You Breathe Is Our Business!

**E.L. FOUST CO., INC. WOULD  
LIKE TO  
INTRODUCE OUR  
*MERCURY VAPOR  
REMOVAL  
DENTAL ATTACHMENT  
FOR OUR SERIES 400  
AIR PURIFIER***

The Series 400 Air Purifier is the largest of our free standing air purifiers. It uses a powerful two speed sealed bearing motor/blower to draw air into a large bed of carbon and a HEPA filter. The carbon will remove chemicals and the HEPA removes particles down to .3 microns in size. The 400 ***SERIES MERCURY VAPOR REMOVAL AIR PURIFIER WITH THE NEW DENTAL ATTACHMENT*** is set up with a MERCURY VAPOR REMOVAL carbon tray, a HEPA filter, and has a UV light included, which is an effective disinfectant. It disinfects air that circulates through the system, rapidly reducing airborne bacteria, viruses and allergens reducing the probability of human infection. The dental attachment is constructed of Durable Clear Polycarbonate, and has a 6' flexible (adjustable in length) suction duct. The unit is designed to capture mercury vapors and drill aerosols during dental procedures. The flexible duct can be placed directly on the patient's chest to capture the mercury vapors and biological particles before they can spread.

Because our Dental Attachment is easily removable, you can have the air purifier running continually in your office for constant clean air, and just attach the dental box when you need it to work on a patient. If you would like more information on this unit, please give us a call at 800-353-6878, e-mail us at [sales@foustco.com](mailto:sales@foustco.com), or visit our website [www.foustco.com](http://www.foustco.com).
